Why eOne?

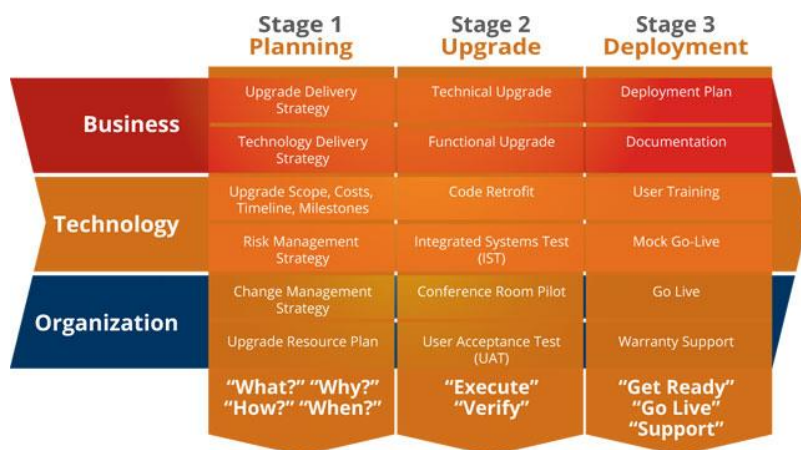

While there are many vendors in the market claiming superior JDE services, few companies have the combination of deep domain expertise and extensive experience that eOne has across industry verticals. We create the solutions that are rich in user experience, intuitive to use with high usability and scalability.

Domain Expertise: Every business has a different task, goal, objective with entirely different business functionality and operations. To roll out a technology is simple but to tailor it to meet business needs requires strong techno-commercial background with deep understanding of business and domain expertise. That is the Key at eOne. We have un-paralleled experience in handling projects from various domains and verticals. Rolling out JD Edwards in Manufacturing, Retail, Automobile, Wine, Banking, our job now became so simple...we just play with it!

Cost Savings: Our onsite resources coupled with offshore resources just not reduce considerable costs, but more than **70%**.

Engagement model: Most of the projects demand combination of various technologies and sometimes it could be a rare skill set. At eOne we have a flexible staffing model that can ramp-up and Ramp-down teams in less than 24 hrs. Our typical engagement models of onsite, offshore and hybrid model gives the best support to our clients within no time.
